## SKI WAX INTRO

Per la stagione 2013-2014 la gamma di scioline BRIKO-MAPLUS *Ski Wax* si divide in 4 linee di prodotti facilmente comprensibili e studiati per soddisfare le esigenze di ogni sciatore:

### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) Powder-Spray-Solid – Cera perfluorurata da utilizzare in sovrapposizione alle paraffine fluorurate in caso di umidità intermedia ed elevata (50%-100%)

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) Solid-Liquid Paraffina ad alto contenuto di fluoro per uso agonistico in condizioni di umidità medio-alta (60%-90%) o come base per sovrapporre le cere perfluorurate FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid Paraffina a basso contenuto di fluoro per allenamento ed uso sportivo, e per uso agonistico in condizioni di umidità medio-bassa (30%-60%) o come base per sovrapporre le cere perfluorurate FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid Paraffina alto e medio fondente indicata per la saturazione e la protezione delle solette da gara e per uso agonistico in condizioni di bassa umidità (< 30%). Paraffina per allenamento ed uso sportivo.

**SATURATION & PROTECTION BASE** (MED BASE - SOFT BASE)

### GRIP WAX

**STICK** – Sciolina di tenuta per nevi nuove, trasformate e artificiali a cristallo fine o con minima metamorfosi distruttiva.

**STICK FLUO** – Condizioni di utilizzo come stick ma con elevata umidità dell'aria.

**KLISTER** – Sciolina di tenuta per nevi trasformate e artificiali a cristallo grosso o con elevata metamorfosi distruttiva.

**KLISTER FLUO** – Condizioni di utilizzo come klister ma con elevata umidità dell'aria.

### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax

Skin & Base Glide Wax

Super Grip & Glide Wax – No wax ski

Paraffine universali per laboratori, noleggi ed uso sportivo.

### KIT LINE

Prodotti di sciolinatura con accessori per allenamento e uso sportivo.

The range of BRIKO-MAPLUS *Ski Wax* for the 2013-2014 season is split into 4 straightforward lines bound to satisfy every skier's needs:

### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) – Perfluorinated wax to be applied on top of fluorinated paraffin products for racing use in presence of medium-very high humidity (50% - 100%).

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) Solid-Liquid – High fluoro paraffin for racing use in presence of medium-high humidity (60% - 90%) or as a base before applying perfluorinated waxes FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – Low fluoro paraffin for training and leisure, and racing use in presence of low-medium humidity (30% - 60%) or as a base before applying perfluorinated waxes FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – High and medium melting point paraffin for saturation and protection of racing ski bases and racing use in presence of low humidity (0% - 30%). Paraffin for training and leisure.

**SATURATION & PROTECTION BASE** (MED BASE - SOFT BASE)

### GRIP WAX

**STICK** – Grip ski wax for fresh, altered or artificial snow with fine crystals or minimal destructive metamorphosis.

**STICK FLUO** – As for Stick, but in presence of high atmospheric humidity.

**KLISTER** – Grip ski wax for altered or artificial snow with large crystals or high destructive metamorphosis.

**KLISTER FLUO** – As for Klistler, but in presence of high atmospheric humidity.

### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax

Skin & Base Glide Wax

Super Grip & Glide Wax – No wax ski

Paraffin products for workshop, ski-rental and leisure.

### KIT LINE

Waxing products with ski tools for training and leisure.

La gamme de fart BRIKO-MAPLUS *Ski Wax* pour la saison 2013-2014 se décompose en 4 catégories afin de satisfaire les besoins de chaque skieur:

### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) Powder-Spray-Solid – Fart 100% fluor, a appliquer pour la compétition en cas d'humidité très élevée. (50% - 100%).

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) Solid-Liquid – Paraffine hautement fluorée pour la compétition en cas d'humidité élevée (60% - 90%). Cette paraffine peut servir de base pour les farts 100% fluor de type FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – Paraffine faiblement fluorée pour l'entraînement et le loisir, paraffine de compétition dans des cas d'humidité moyen (30%- 60%). Cette paraffine peut servir de base pour les farts 100% fluor de type FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – Paraffine d'imprégnation pour ski neufs, pour protéger les skis en stockage ou encore paraffine de base pour fart de compétition ou bien la compétition en cas de faible humidité (0% - 30%). Paraffine pour l'entraînement et le loisir.

**SATURATION & PROTECTION BASE** (MED BASE - SOFT BASE)

### GRIP WAX

**STICK** – Fart en poussette pour neige artificiel, fraîche avec des cristaux fins et non métamorphosés.

**STICK FLUO** – Fart en poussette plus performante en conditions de haute humidité.

**KLISTER** – Fart de retenu pour neige artificiel transformée, grosse métamorphose des cristaux.

**KLISTER FLUO** – Fart de retenu plus performant en conditions de haute humidité.

### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax

Skin & Base Glide Wax

Super Grip & Glide Wax – No wax ski

Paraffine pour les magasins, location et le loisir.

### KIT LINE

Gamme des produits de fartage pour l'entraînement et le loisir.

Alle Spraywaxse sowie die komplett neue Produktlinie von Pulverwachsen garantieren auch weiterhin außergewöhnliche Ergebnisse, bei allen Schnee-Bedingungen. Die Kollektion der BRIKO-MAPLUS Waxse teilt sich in 4 wichtige Produkt-Linien für die Saison 2013-2014 auf und erfüllt damit alle Bedürfnisse der Skisportler:

#### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) Powder-Spray-Solid – Perfluorierte Cera-Wachse für den Renn-Gebrauch als Finish-Wachse über alle fluorierten Paraffin-Wachse, bei mittlerer bis hoher Luftfeuchtigkeit (50 %-100%).

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) Solid-Liquid – High-Fluor-Paraffinwachse für den Renn-Gebrauch bei mittlerer bis hoher Luftfeuchtigkeit (60 %-90%) oder als Base-Wachs unter die perfluorierten Cera-Wachse FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – Low-Fluor-Paraffinwachse für den Gebrauch bei niedriger bis mittlerer Luftfeuchtigkeit (30 %-60%) oder als Base-Wachse unter die perfluorierten Cera-Wachse FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid – Paraffine mit mittleren und hohen Schmelzpunkten für die Sättigung und zum Schutz der Rennbeläge sowie für Rennen bei geringer Luftfeuchtigkeit (0% - 30%). Paraffinwachse für Training und Freizeit.

#### SATURATION & PROTECTION BASE (MED BASE – SOFT BASE)

#### GRIP WAX

**STICK** – Steigwaxse für Neuschnee, Altschnee und Kunstschnee mit feinen Kristallen oder für bereits leicht umgewandelten Schnee.

**STICK FLUO** – Anwendung wie bei Hartwachs-Sticks, jedoch für hohe Luftfeuchtigkeit.

**KLISTER** – Steigwachs für Altschnee und Kunstschnee mit groben Kristallen oder stark umgewandelten Schnee.

**KLISTER FLUO** – Anwendung wie bei Klister, jedoch für hohe Luftfeuchtigkeit.

#### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax  
Skin & Base Glide Wax  
Super Grip & Glide Wax – No wax ski

Universal-Paraffinwachse für Werkstätten, Verleih und Rennlauf.

#### KIT LINE

Wachs-Sets mit ski-tools für Training und Freizeit.

Для сезона 2013 - 2014 г. гамма лыжных мазей BRIKO-MAPLUS Ski Wax разделится на 4 линейки продуктов легких в понимании и предназначенных для удовлетворения потребностей каждого лыжника

#### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) – Порошок-Спрей-Твёрдая – Цера высокофтористая используется для нанесения сверху фтористых парафинов в случае средней и высокой влажности (50% -100%)

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) – Твёрдый – Жидкий – Парафин с высоким содержанием фтора для использования при соревнованиях в условиях средне-высокой влажности (60%-90%) или как база перед нанесением высокофтористой церы FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Твёрдый – Жидкий – Парафин с низким содержанием фтора для тренировок и спортивного использования, а также для использования при соревнованиях при низко-средней влажности (30%-60%) или как база перед нанесением высокофтористой церы FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) – Твёрдый – Жидкий – Парафин высокой и средней степени мягкости предназначен для насыщения и защиты скользящей поверхности лыж для соревнований в условиях низкой влажности

(< 30%). Парафин для тренировок и спортивного использования.

#### SATURATION & PROTECTION BASE (MED BASE – SOFT BASE)

#### GRIP WAX

**STICK** – Мазь на держание для нового снега, трансформированного и искусственного мелкокристаллического или с минимальными разрушительными изменениями.

**STICK FLUO** – Условия применения как и stick, но при повышенной влажности воздуха.

**KLISTER** – Мазь на держание для преобразованного и искусственного крупнокристаллического снега или с повышенными разрушительными изменениями.

**KLISTER FLUO** – Условия применения как и клистер, но при повышенной влажности воздуха.

#### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax  
Skin & Base Glide Wax  
Super Grip & Glide Wax – No wax ski

Универсальные парафины для лабораторий, прокатов и спортивного использования.

#### KIT LINE

Материал для смазки лыж с аксессуарами для тренировок и спортивного использования.

Lyžářské vosky firmy BRIKO-MAPLUS jsou v sezóně 2013-2014 rozděleny do čtyř kategorií tak, aby byly uspokojeny požadavky všech kategorií lyžařů:

#### RACE WAX

**FP4** (COLD-MED-HOT-SUPERMED) – Powder-Spray-Solid - Perfluorovaný závodní vosk pro aplikaci na fluorované parafíny při střední až velmi vysoké vlhkosti (50100%).

**HP3** (GREEN-BLUE-VIOLET-RED-YELLOW 1/2-ORANGE 1/2) – Solid-Liquid - Závodní parafín s vysokým obsahem fluoru pro použití při středně vysoké vlhkosti (6090%) nebo jako základ před aplikací perfluorovaného vosku FP4.

**LP2** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) Solid-Liquid - Parafín s nízkým obsahem fluoru určen pro volný čas, trénink a závody v případě nízké až středně vysoké vlhkosti (30-60%) nebo jako základ před nanesením perfluorovaného vosku FP4.

**BP1** (GREEN-BLUE-VIOLET-RED-YELLOW-ORANGE) – Solid-Liquid - Parafín s vysokým a středním bodem tání, který je užíván k nasycení a ochraně povrchu závodních lyží a při závodech za nízké vlhkosti (0-30%).

#### SATURATION & PROTECTION BASE (MED BASE – SOFT BASE)

#### GRIP WAX

**STICK** – Vosk určen pro čerstvý, upravovaný nebo umělý sníh s jemnými krystaly nebo při minimální metamorfóze.

**STICK FLUO** – Tento vosk je stejně jako „STICK“ určen pro čerstvý, upravený nebo umělý sníh s jemnými krystaly nebo při minimální metamorfóze, avšak používá se v případě vysoké vlhkosti vzduchu.

**KLISTER** – Vosk určen pro upravovaný nebo umělý sníh s velkými krystaly nebo při vysoké metamorfóze.

**KLISTER FLUO** – Tento vosk je stejně jako „KLISTER“ určen pro upravovaný nebo umělý sníh s velkými krystaly nebo při vysoké metamorfóze, avšak používá se v případě vysoké vlhkosti vzduchu.

#### UNIVERSAL WAX

Universal solid  
Universal solid fluo  
Universal granular  
Universal liquid  
Super glide wax  
Skin & Base Glide Wax  
Super Grip & Glide Wax – No wax ski  
Parafinové produkty určené pro dílny, půjčovny lyží a aktivity volného času.

#### KIT LINE

Vosky s příslušenstvím pro trénink a aktivity volného času.

## GENERAL FEATURES

### INDICAZIONI:

E' consigliabile mettere sempre uno strato di base stick S60 ORANGE a caldo con il ferro sciolinatore. Lo spessore dello strato di base è in funzione dell'abrasività della neve. Maggiore sarà l'abrasività, maggiore sarà lo strato da applicare. La sciolinatura completa richiede come minimo 3 strati di stick sovrapposti anche differenti e di volta in volta tirati con il sughero sintetico.

E' consigliabile mettere sempre uno strato di base klister K82 GREEN a caldo con il ferro sciolinatore. Lo spessore dello strato di base è in funzione dell'abrasività della neve. La sciolinatura completa richiede come minimo 2 strati di klister anche mischiati, e di volta in volta tirati con il pollice. Con neve che tende a ghiacciare è consigliabile usare le stick come indicato in tabella per coprire le klister evitando che ghiaccino compromettendo la tenuta. E' necessario lasciar raffreddare lo sci e dopo l'applicazione dello stick tirarlo in modo leggero e rapido con il sughero sintetico. In caso sciolinatura klister a basse temperature è necessario munirsi di fiamma a gas portatile per riscaldare le scioline e riuscire a miscelarle e tirarle con il pollice o il palmo della mano.

### INDICATIONS:

It is suggested to use always a basic layer of stick S60 ORANGE hot by passing the waxing iron. The layer thickness depends on the snow abrasion factor. The complete waxing requests at least 3 layers, even different, spread from time to time with synthetic cork.

It is suggested to use a basic layer of klister K82 GREEN hot by means of the waxing iron. The layer thickness depends on the snow abrasion factor. The complete waxing requests at least 2 layers, even mixed, from time to time with your thumb. When the snow becomes icy, it is suggested to use the stick as indicated in the tabel to cover the klister and so avoiding that it ices loosing the gripping effect. After application of the stick, wait for the ski to cool down, then use the synthetic cork slightly and quickly. In case of klister waxing with low temperature, use a portable gas flame to heat the wax and mix it, then spread it with your thumb or the palm of your hand.

### MODE D'EMPLOI:

Il est conseillé de mettre toujours une couche de stick de base S60 ORANGE à chaud, avec le fer de fartage. L'épaisseur de la couche dépend de l'abrasivité de la neige. Le fartage complet requiert au minimum 3 couches de stick superposées, même différentes, et étirées chaque fois avec le liège synthétique.

Il est conseillé de mettre toujours une couche de klister de base K82 GREEN à chaud, avec le fer de fartage. L'épaisseur de la couche dépend de l'abrasivité de la neige. Le fartage complet requiert au minimum 2 couches de klister superposées,

même mélangées, et étirées chaque fois avec le pouce. vec la neige qui a tendance à glacer, il est recommandable d'utiliser les sticks, comme indiqué sur le tableau, pour couvrir les klisters en évitant qu'ils ne glacent, ce qui diminuerait la prise. Il faut laisser refroidir le ski, et après avoir appliqué le stick passer légèrement et rapidement avec le liège synthétique. En cas de fartage au klister à basse température, il faut se munir d'une flamme à gaz portable, pour chauffer les farts et pour pouvoir les mélanger, et les étirer avec le pouce ou avec la paume de la main.

### TIPP:

Die Steigwaxse werden auch zum Abdecken der Klister eingesetzt, womit verhindert werden soll, dass letztere aneisen und damit der Abstoss des Ski verloren geht. Es ist notwendig den Ski abkühlen zu lassen, bevor das Steigwachs mit einem Synthetikork eingearbeitet wird, wobei dieses rasch, aber ohne grossen Druck verrieben wird. Wenn Klister bei kalten Temperaturen gewachst werden, kann es notwendig sein sich einer Gasflamme zu bedienen, um die verfestigten Klister zuerst aufzuwärmen und zu verflüssigen und diese dann mit dem Daumen oder Handballen zu verreiben.

### ПРЕДПОСЫЛКА:

Рекомендуется всегда наносить один слой базы stick S60 ORANGE и разогревать утюгом для лыжных мазей. Толщина слоя базы зависит от жёсткости снега. Чем абразивнее снег, тем толще слой базы. Нанесение лыжной мази в полном комплекте требует как минимум 3 слоя stick, даже разного типа, но каждый раз необходимо растирать синтетической пробкой.

Рекомендуется всегда наносить один слой базы klister K82 GREEN и разогревать утюгом для лыжных мазей. Толщина слоя базы зависит от жёсткости снега. Нанесение лыжной мази в полном комплекте требует как минимум 2 слоя klister, можно смешивать, но каждый раз необходимо растирать большим пальцем. При снеге, который может заледенеть, рекомендуется использовать stick, как указано в таблице, чтобы покрыть klister и исключить риск недержания лыж. Необходимо оставить лыжи охлаждаться и после нанести stick, растирая синтетической пробкой лёгкими и быстрыми движениями. В случае использования klister при низких температурах, необходимо запастись переносной газовой горелкой для разогрева мази, чтобы удалось нанести её на колодку и размазать большим пальцем или ладонью.

### ZPŮSOB POUŽITÍ:

Doporučuje se jako základní vrstvu za použití žehličky použít STICK S60 ORANGE HOT. Tloušťka vrstvy závisí na faktoru abrazy sněhu. Kompletní ošetření vyžaduje alespoň 3 vrstvy, které mohou tvořit různé typy vosku, rozetřené syntetickým korkem.

Doporučuje se jako základní vrstvu za použití žehličky použít KLISTER K82 GREEN HOT. Tloušťka vrstvy závisí na faktoru abrazy sněhu. Kompletní ošetření vyžaduje alespoň 2 vrstvy, které mohou tvořit různé typy klistru, rozetřené palcem. Pokud sníh začne mrznout, je třeba použít STICK tak, jak je uvedeno v tabulce. Tím dojde k překrytí klistru a předejde se jeho ztuhnutí a ztrátě odrazového efektu. Po aplikaci vosku vyčkejte, až lyže zchladne, a poté rychle a zlehka rozetřete syntetickým korkem. V případě použití klistru při nízké teplotě užíjte k zahřátí vosku přenosný "plynový" hořák, smíchejte s klistrem a rozetřete palcem nebo dlaní.

Apply hot or cold every perfluorinated wax FP4 (powder, spray or solid) or liquid paraffins as recommended in the waxing manual Briko-Maplus Ski Wax, available on [www.brikomaplus.it](http://www.brikomaplus.it). Instead of roto-cork and traditional horsehair and nylon brushes use new rollers of polyester and merino wool as follows:

1. Roll the base surface with the roto-polyester in both directions at a speed between 1000 and 1500 rpm according to the pressure applied. Repeat several times until the complete saturation of the base surface. Wait at least 10 minutes for cooling of the base surface and for the ski wax to harden.
2. Free the base structure with the 5 mm. roto-wool.
3. Polish the base structure with the 10 mm. roto-wool.

For top performances is necessary one set of new rollers for every type of product (cold-med-hot).
